LAB 1 – USE-CASE FLOW SPECIFICATION

Project: Urban Rooftop Gardening Co-op App
Problem Statement: #65

Use Case Details

Use Case ID: UC-07
Use Case Name: List Surplus Produce
Primary Actor: Co-op Gardener

Preconditions

1. The gardener is registered and logged into the application.
2. The gardener has surplus produce available for listing.

Postconditions

1. The surplus produce listing is saved and displayed on the trade board.
2. Community members can view the listing details.

Main Success Scenario

1. The gardener logs into the application.
2. The gardener selects **List Surplus Produce**.
3. The system displays the listing form.
4. The gardener enters the produce name, quantity, and availability.
5. The gardener submits the listing.
6. The system validates the entered information.
7. The system saves the surplus produce listing.
8. The system displays the listing on the trade board.
9. The use case ends successfully.

Alternate Flow – Invalid Listing Details

4a. The gardener enters missing or invalid listing information.
4a1. The system displays an error message identifying the required fields.
4a2. The gardener corrects the information and resubmits the listing.
4a3. The system resumes at Step 5 of the main success scenario.
